Riding the wave of transformation in scholarly communication and open access

Dr Ginny Barbour, Director OpenAccess Australasia, and incoming Editor *Medical Journal of Australia*

The past few years have just seen an acceleration of open initiatives - open access, open science and open infrastructure - given even more urgency by the COVID-19 pandemic.

These can seem like challenging and confusing times for libraries and others involved in scholarly communication, but I’d argue they should be seen as a huge opportunity to transform scholarly communication for the better. I’ll provide a global overview of some of the major recent developments and discuss how they might affect libraries, journals and academics in our region.

Biography

Prof Virginia (Ginny) Barbour is Co-Lead, Office for Scholarly Communication, Queensland University of Technology (QUT) and Director of Open Access Australasia. She trained in the UK in

medicine, specialising in haematology and then went on to do a DPhil at Oxford University and post-doctoral research in the US on globin gene regulation.

She was one of the three founding editors of *PLOS Medicine*. She has been involved in many international open access, innovative scholarly communication and publication and research integrity initiatives. She was previously Chair of the Committee on Publication Ethics (COPE). She is currently Vice-Chair of the Declaration on Research Assessment (DORA) Steering Committee, a Plan S Ambassador, a member of Confederation of Open Access Repositories (COAR)'s Executive Board and a member of the Australian NHMRC's Research Quality Steering Committee. She is an editorial advisor to *medRxiv*. She will be the Editor in Chief of the Medical Journal of Australia, starting in Jan 2023.

Knowledge engineering - Librarians driving the management of consumer health information at Healthdirect Australia

James Hummfray, HealthDirect, Information Management Manager

James Humffray is Information Manager at Healthdirect Australia, a government-funded organisation with a mission to improve the health of Australians. Healthdirect provides health services that are easily accessible via multiple channels — helplines, video call solutions, websites, service finders, mobile applications and social media networks. James manages the Knowledge Engineering team, comprised of librarians, responsible for information architecture and content structure for Healthdirect websites, tools and services. The Knowledge Engineering team manages a health thesaurus that reflects the current Australian health and medical environment. James has been at Healthdirect for nearly ten years and has experienced the impacts on consumer digital health, especially in our recent troubled times. This presentation will discuss how his team of librarians and knowledge engineers have responded to these impacts.
